

Supplementary Figure 1. Correlation between retinal thickness and ^{18}F -FDG values. A: The average thickness of the macula was positively correlated with the ^{18}F -FDG values in the cerebellum Crus I and parietal region. B: The thickness of the OT macula was positively correlated with the ^{18}F -FDG values in the cerebellum Crus I. C: The thickness of the OI macula was positively correlated with the ^{18}F -FDG values in the cerebellum Crus I. ^{18}F -FDG, ^{18}F -fluorodeoxyglucose; OT, outer temporal; OI, outer inferior.
