

Supplementary Figure 1. Group-based trajectory modeling (GBTM) and FPG categories. GBTM resulted in the formation of three subgroups. Group 1 ($n = 85$) consisted of patients with euglycemic FPG level. Group 2 ($n = 91$) comprised patients with intermediate FPG level. Groups 3 ($n = 25$) consisted of patients with hyperglycemic FPG level. FPG, fasting plasma glucose.
