

Supplementary Figure 1. Responses to a survey conducted among the movement disorder specialists in South Korea regarding the clinical unmet need in managing patients with Huntington's disease (HD).

This figure represents the results of a survey conducted among the movement disorder specialists in South Korea (total n = 31) regarding the management of Huntington's disease patients in 2022. The survey question posed was, "What is the most difficult challenge you face when managing Huntington's disease patients?" A significant portion of the respondents (36.7%, 11/30) stated that a lack of treatment guidelines and appropriate evidence-based reviews was their primary challenge (red box).
